

Subject: Issue 263
From: Van Snyder
References: 00-179

1 Introduction

The editor doesn't like the wording of section 2.2.3.4. Here's different wording.

2 Edits

Edits refer to 00-007r1. Page and line numbers are displayed in the margin. Absent other instructions, a page and line number or line number range implies all of the indicated text is to be replaced by immediately following text, while a page and line number followed by + indicates that immediately following text is to be inserted after the indicated line. Remarks for the editor are noted in the margin, or appear between [and] in the text.

The purpose of an **interface block** is to describe the interfaces (12.3) to a set of procedures, and the forms of reference by which procedures may be invoked (12.4). It may be used to specify the interface of external or dummy procedures, or that procedures may be invoked: 13:4-7

- (1) By using a generic name,
- (2) By using a defined operator,
- (3) By using a defined assignment, or
- (4) For derived-type input/output.

[but don't do the last one if the "radical proposal" in 00-179 passes.]

[Editor: Delete issue 263.] 13:8-12
