1. Introduction

Issue 332 says
"Shouldn't R823 have a constraint like the 2nd one after R818? I don't see how one can argue that the one on R818 applies."

Well, the ones on R818 apply to all uses of R818 (and R823 uses R818).

Unfortunately, this means that the 3rd constraint is being applied to the ASSOCIATE construct. This is just totally wrong.

Also, the glossary entry for *associate-name* is incomplete.

2. Edits to 01-007r1

[154:45] After "*selector*" insert "in a SELECT TYPE statement".
{We do not want this constraint to apply to the ASSOCIATE construct.}

[156:13-16] Delete J3 note 332.

[397:40] Change "the type" to "a".
After "TYPE" insert "or ASSOCIATE".
