Subject: Unresolved issue 362

From: John Reid, as revised by Van Snyder

1 Introduction

Subgroup suggests one change to 02-178, shown below on page 2. For the convenience of members, we also show how the T_EXisms in 02-178 will be rendered.

2 Original text of 02-178, with modification indicated

```
I would like to acknowledge the help of Malcolm Cohen, Richard Maine,
   Dick Hendrickson, and Dan Nagle in constructing this paper.
   Unresolved issue 362 is
8
9
      The comments apply to the IEEE SUPPORT * functions, and possibly
10
      others.
11
      There are several problems here
13
      A) IEEE_SUPPORT_DENORMAL can't be a generic function since the rules
15
      do not allow an optional argument to be the generic decider. Do we
16
      need to have 2 cases in the header IEEE_SUPPORT_DENORMAL() and
      IEEE_SUPPORT_DENORMAL(X)? Does that match the intent?
18
      B) How should the restriction be read? It's clear that
20
      IEEE_SUPPORT_DENORMAL(3.14) can't be invoked unless
      IEEE_SUPPORT_DATATYPE(3.14) is true; but can IEEE_SUPPORT_DENORMAL()
22
      be invoked if IEEE_SUPPORT_DATATYPE() is false? The restriction
23
      could be read either way. What was the intent?
24
25
      C) How should this be treated if X is an optional argument in the
      invoker?
27
           Call z ()
28
29
           Subroutine z(X)
30
           Real, optional :: X
31
           Print *, IEEE_SUPPORT_DENORMAL(X)
32
      Is this illegal because it's a reference to a not-present optional
      argument? Is it the same as Print *, IEEE SUPPORT DENORMAL(3.14)
      because only the properties of X apply? Is it the same as Print *,
36
      IEEE SUPPORT DENORMAL() because the argument isn't present and
37
      unpresentness flows down the call chain?
38
39
   I think the answer to A) should be yes. The sensible interpretation of
```

13 May 2002 Page 1 of 4

the code C) is that the inquiry is about a compile-time property of X

```
that is independent of its presence. I do not think anyone foresaw this
  difficulty when we were writing the TR. Furthermore (see 02-161r1),
  similar considerations apply to several existing inquiry functions,
  such as KIND. Malcolm Cohen has suggested edits to pp. 270-271 to
  cover the general case (see below). To make this cover the IEEE
  inquiries, we need to to allow an IEEE inquiry function to be an
  initialization expression, a derirable change anyway. A simple way to
  do this is to extend the definition of specification inquiry so that
  7.1.7 (8) applies to IEEE inquiry functions.
10
  B) highlights an ambiguity that needs resolution anyway. It would be
  more friendly to the user to allow the case where IEEE_SUPPORT_DATATYPE
  is false and return false in this case. This is just a minor extension
13
  from what is in the TR.
   Edits -02-007r1
   127:41. Set 'specification inquiry' in bold and add an index reference
         to it.
  128:5.
          Delete 'or'
19
          Change '.' to ', or'
  128:6.
20
  128:6+. Add
21
       (7) an IEEE inquiry function (14.8.1).
22
   Begin Revised Edit
   270:32. After 'PRESENT intrinsic function' add 'or as an argument of a
24
         function reference that meets the requirements of (7) or (8) in
25
         7.1.7%
26
   End of Revised Edit
27
   270:38-40. Change
28
        If it is a pointer, it shall not be allocated, deallocated,
29
        nullified, pointer-assigned, or supplied as an actual argument
30
        corresponding to a nonpointer dummy argument other than as the
31
        argument of the PRESENT intrinsic function.
32
      to
        If it is a pointer, it shall not be allocated, deallocated,
        nullified, pointer-assigned, or supplied as an actual argument
35
        corresponding to an optional nonpointer dummy argument.
36
      This change simply factors OUT the cases already covered by the ordinary
37
      one (lines 31-32).
38
   270:41-42. Change
40
        If it is allocatable, it shall not be allocated, deallocated, or
        supplied as an actual argument corresponding to a nonallocatable
```

```
dummy argument other than as the argument of the PRESENT intrinsic
2
        function.
3
4
      to
        If it is allocatable, it shall not be allocated, deallocated, or
        supplied as an actual argument corresponding to an optional
        nonallocatable dummy argument.
   271:1. Change
9
        If it has type parameters, they shall not be inquired about.
10
11
        If it has nonkind type parameters, they shall not be the
12
        subject of an inquiry.
13
   371:23. Change the title to
15
               IEEE_SUPPORT_DATATYPE() or IEEE_SUPPORT_DATATYPE(X)
16
17
   Elsewhere. Make a similar change on each of the lines 372:1, 373:1,
18
       373:14, 374:11, 374:23, 374:37, 375:12, 375:27,
   371:26. Delete '(optional)'.
21
22
   Elsewhere. Make the same change on each of the lines 372:4, 373:5,
23
       373:19, 374:14, 374:27, 375:3, 375:17, 375:31,
24
25
   372:5-6. Delete these lines and the J3 internal note.
26
27
   Elsewhere. Delete the lines 373:6-7, 373:20-21, 374:15-16, 374:28-29,
28
       375:4-5, 375:18-19, 375:32-33.
29
30
   372:8-11. Replace by
31
32
   \resvalue{}
33
34
   \begin{incase}
35
     \item IEEE\_SUPPORT\_DENORMAL(X) has the value true if
36
     IEEE\_SUPPORT\_DATATYPE(X) has the value true and the processor
37
     supports arithmetic operations and assignments with denormalized
38
     numbers (biased exponent $e = 0$ and fraction $f \neq 0$, see section
39
     3.2 of the IEEE standard) for real variables of the same kind type
40
     parameter as X; otherwise, it has the value false.
43
     \item IEEE\_SUPPORT\_DENORMAL() has the value true if and only if
     IEEE\_SUPPORT\_DENORMAL(X) has the value true for all real X.
   \end{incase}
45
   This is how the above TeXism compiles:
```

Result Value.

13 May 2002 Page 3 of 4

```
Case (i):
                     IEEE_SUPPORT_DENORMAL(X) has the value true if IEEE_SUP-
1
                     PORT_DATATYPE(X) has the value true and the processor supports
2
                     arithmetic operations and assignments with denormalized numbers (biased
                     exponent e=0 and fraction f\neq 0, see section 3.2 of the IEEE standard)
                     for real variables of the same kind type parameter as X; otherwise, it has
                     the value false.
6
         Case (ii):
                     IEEE_SUPPORT_DENORMAL() has the value true if and only if
7
                     IEEE_SUPPORT_DENORMAL(X) has the value true for all real X.
8
   Elsewhere. Make similar changes to lines 373:9-11, 373:23-25,
      374:18-20, 374:31-34, 375:7-9, 375:21-24, 375:35-376:1.
10
   376:11-24. Change to
12
   \begin{incase}
14
     \item IEEE\_SUPPORT\_STANDARD(X) has the value true if the results
16
     of all the functions IEEE\_SUPPORT\_DATATYPE(X),
17
     IEEE\_SUPPORT\_DENORMAL(X), IEEE\_SUPPORT\_DIVIDE(X),
18
     IEEE\_SUPPORT\_FLAG(FLAG,X) for valid FLAG,
19
     IEEE\_SUPPORT\_HALTING(FLAG) for valid FLAG, IEEE\_SUPPORT\_INF(X),
20
     IEEE\_SUPPORT\_NAN(X), IEEE\_SUPPORT\_ROUNDING(ROUND\_VALUE,X) for
21
     valid ROUND\_VALUE, and IEEE\_SUPPORT\_SQRT(X) are all true;
22
     otherwise, the result has the value false.
23
     \item IEEE\_SUPPORT\_STANDARD() has the value true if and only if
25
     IEEE\_SUPPORT\_STANDARD(X) has the value true for all real X.
26
   \end{incase}
27
   This is how the above TEXism compiles:
28
         Result Value.
29
         Case (i):
                     IEEE_SUPPORT_STANDARD(X) has the value true if the results
30
                     of all the functions IEEE_SUPPORT_DATATYPE(X),
                                                                          IEEE_SUP-
31
                     PORT_DENORMAL(X),
                                             IEEE_SUPPORT_DIVIDE(X),
                                                                           IEEE_SUP-
32
                     PORT_FLAG(FLAG,X) for valid FLAG, IEEE_SUPPORT_HALT-
33
                     ING(FLAG) for valid FLAG, IEEE\_SUPPORT\_INF(X), IEEE\_SUP-
                     PORT_NAN(X), IEEE_SUPPORT_ROUNDING(ROUND_VALUE,X) for
35
                     valid ROUND_VALUE, and IEEE_SUPPORT_SQRT(X) are all true;
36
                     otherwise, the result has the value false.
37
         Case (ii):
                     IEEE_SUPPORT_STANDARD() has the value true if and only if
38
```

13 May 2002 Page 4 of 4

39

IEEE_SUPPORT_STANDARD(X) has the value true for all real X.
