Alphabetize the PENDING= Specifier in the INQUIRE Statement

To: J3
From: Craig Dedo
Date: August 13, 2002
Subject: Alphabetize the PENDING= Specifier in the INQUIRE Statement

Rationale

Readers of the Fortran 2000 Standard would be surprised to find the PENDING= specifier out of the usual alphabetical order in the explanation of specifiers for the INQUIRE statement.

Edits

Edits refer to the 02-007r2 draft of Fortran 2000.

[212:36] Insert "(9.9.1.18a)" after "ID= specifier".

[214:13+] Add a new section title, "9.9.1.18a PENDING= specifier in the INQUIRE statement".

[212:33 – 213:8 –] Move the text of section 9.9.1.12, including the first edit above, to the new section at [214:13+].

[212:32] Rename section 9.9.1.12 and insert new text as follows:

9.9.1.12 ID= specifier in the INQUIRE statement

The value of the variable specified in the ID= specifier shall be the identifier of a pending data transfer operation for the specified unit. Also see the PENDING= specifier (9.9.1.18a).
