Subject: "Unsaved" should be "nonsaved"
From: Van Snyder

1 Introduction

The term "unsaved" has a temporal connotation, i.e., becoming "unsaved" is a process. Whether a variable has the SAVE attribute is, however, a static condition. A variable does not become saved, or become unsaved. When the absence of any other attribute is discussed, it has the "non" prefix, not the "un" prefix. The term "unsaved" is the wrong term; it ought to be "nonsaved".

Page and line numbers refer to 02-007r3.

Editor: Replace "unsaved" by "nonsaved" everywhere, preserving case. Many of them also require replacing "an" by "a". The Editor will know what to do. Here are most (maybe all) of the places:
