C2: In the edit for [251:12], insert "," before "except" and "may have a different accessibility attribute, or it" after "entity".

C7: Replace the edit for [73:22-24] by "Replace constraint C528 by

C528 (R501) If the VALUE attribute is specified, the length type parameter values shall be omitted or specified by initialization expressions."

2 Comments on 04-277

[Agree with the strategy, but it would be kinder to the reader if the definitions of "numeric sequence type" and "character sequence type" appeared first in each sentence instead of last. Replace "If ... character sequence type." by 46:17-22

"The type is a **numeric sequence type** if there are no type parameters, no pointer or allocatable components, and each component is of type default integer, default real, double precision real, default complex, default logical, or a numeric sequence type. The type is a **character sequence type** if there are no type parameters, no pointer or allocatable components, and each component is of type default character or a character sequence type."
