Subject: Issue 263
From: Van Snyder
References: 00-179

1 Introduction

The editor doesn't like the wording of section 2.2.3.4. Here's different wording.

2 Edits

Edits refer to 00-007r1. Page and line numbers are displayed in the margin. Absent other instructions, a page and line number or line number range implies all of the indicated text is to be replaced by immediately following text, while a page and line number followed by + indicates that immediately following text is to be inserted after the indicated line. Remarks for the editor are noted in the margin, or appear between [and] in the text.

The purpose of an **interface block** is to describe the interfaces (12.3) to a set of procedures, and the forms of reference by which a procedure may be invoked (12.4). It may be used to specify the interface of an external or dummy procedure, or that a procedure may be invoked: 13:4-7

(1) By using a generic name,

(2) By using a defined operator,

(3) By using a defined assignment, or

(4) For derived-type input/output.

[but don't do the last one if the "radical proposal" in 00-179 passes.]

[Editor: Delete issue 263.] 13:8-12
