

Subject: Addressing comments in 02-209 concerning 02-166r2  
 From: Van Snyder

## 1 Introduction

It's difficult to review ones own material: Being close to its development, one knows what one wants to say, so words on paper look right.

Since Malcolm hasn't been able to come to meetings, I have been suspicious that my papers were getting through subgroup too easily, and too much like they were originally written. Judging from the number and severity of problems noticed by the Editor in 02-209, my fears were not groundless.

The Editor's concern that characteristics of dummy arguments are excluded by the insertion at 255:5 is misplaced: Procedure characteristics include its dummy argument characteristics.

The Editor expressed concern that a pre-existing passage at [277:5] says an interface is "for" a dummy argument, but it's not clear what that means. This is addressed by the edit for [257:22] below.

## 2 Edits

Edits refer to 02-007r2. Page and line numbers are displayed in the margin. Absent other instructions, a page and line number or line number range implies all of the indicated text is to be replaced by associated text, while a page and line number followed by + (-) indicates that associated text is to be inserted after (before) the indicated line. Remarks are noted in the margin, or appear between [ and ] in the text.

---

[The problem here is that a name isn't an external procedure. It predates 02-166r2. Editor: 81:13  
 Insert "the name of" before "an".]

---

[Editor: Insert "(12.3.2.1)" after "body".] 81:17

---

[What is "it"? Editor: "it" ⇒ "a name that has the EXTERNAL attribute"; "the name" ⇒ 81:28  
 "a name has the EXTERNAL attribute but".]

---

[Editor: Insert "the name of" after "not".] 81:29

---

[Editor: "If the" ⇒ "Within a scoping unit, if a".] 81:37

---

[Editor: "none of the above apply" ⇒ "a name has the EXTERNAL attribute but it is not the 81:39  
 name of an external procedure or block data program unit,".]

---

[Editor: Delete the \ characters before the { and } characters that are delimiters for the \mindex 257:20  
 macro's argument. As it stands, it put { in the index.]

---

[Editor: "its" ⇒ ", a dummy procedure or external procedure having that".] 257:22

---

[The BIND attribute was deleted from the list of characteristics of procedures by 02-166r2. It 392:15-16  
 also doesn't make any sense that a dummy argument has a binding label. Editor: delete "If ...  
 argument."]

---

[Editor: "in the case of generic names. A" ⇒ "that an interface body may have the same name 394:16  
 as a dummy procedure, and a".]
