Response to UK Edit E11

To: J3

Subject: Response to UK Edit E11

Rationale:
The UK suggested edit E11 (in WG5-N1506) was:

E11 Section 9.6.2 Page 204:23

Change: "A wait operation terminates a pending data transfer operation" to "A wait operation terminates (9.5.4) a pending data transfer operation".

Rationale: Without careful reading of 9.6.1, this could be interpreted to mean that the wait interrupts and stops a data transfer operation.

Richard rejects this on the grounds that the cross-reference is to a data transfer statement rather than to a data transfer operation. I still believe that the text in the document is open to misinterpretation and would benefit from clarification. Any advice from /jor would be gratefully received.

Edits:
JOR reviewed this concern and recommends the following edit.

[204:23] In the first sentence, change “terminates” to “completes the processing of”. In the second sentence, change “terminates” to “completes”.
