Subject: Structure constructor clarifications
From: Van Snyder

1 Edits

Edits refer to 03-007. Page and line numbers are displayed in the margin. Absent other instructions, a page and line number or line number range implies all of the indicated text is to be replaced by associated text, while a page and line number followed by + (-) indicates that associated text is to be inserted after (before) the indicated line. Remarks are noted in the margin, or appear between [and] in the text.

[Editor: Delete "be".] 62:17

[Editor: "is present" ⇒ "appears".] 62:34

[Editor: Before "If" insert "For a nonpointer component, the declared type and type parameters of the component and *expr* shall conform in the same way as for a *variable* and *expr* in an intrinsic assignment statement (7.4.1.2), as specified in Table 7.8." 62:35

[Editor: Insert "of intrinsic type" after "value".] 62:35

[Why are things suddenly plural? Editor: Insert "a" before "nonpointer" and replace "components" by "component".] 62:37

[Says nothing. Wouldn't belong here if it did. Editor: Delete it.] 63:5-6

[Too wordy. Editor: "Where ... pointer" ⇒ "For a pointer component".] 63:7

[Editor: Add a new sentence at the end of the paragraph:] 63:8
If the component data source is a pointer the association of the component is that of the pointer; otherwise the component is pointer associated with the component data source.

[Editor: Insert "of the same rank" after "allocatable entity".] 64:2

[Editor: Insert "dynamic type," after "same", insert a comma after "bounds", and insert "; if a length parameter of the component is deferred, its value is the same as the corresponding parameter of the expression" after "value".] 64:6

[Editor: Delete "(if any)" twice.] 64:6-7
