Subject: Miscellaneous remarks
From: Van Snyder

1 Edits

Edits refer to 99-007r2. Page and line numbers are displayed in the margin. Absent other instructions, a page and line number or line number range implies all of the indicated text is to be replaced by immediately following text, while a page and line number followed by + indicates that immediately following text is to be inserted after the indicated line. Remarks for the editor are noted in the margin, or appear between [and] in the text.

Vote on the subsections separately.

1.1 Purely editorial

[Editor: add "a block data program unit," before "or".]	82:28
[Editor: Replace "code" by "statements".]	255:23
Constraint: If the dummy argument with which *actual-arg* is associated is polymorphic (which requires explicit interface), the declared type of *actual-arg* shall be an extension type (4.5.3) of the declared type of the dummy argument.	273:31+
The above constraint also appears as ordinary normative text at 275:6-8. It is left there, because that sentence also covers the case of a non-polymorphic dummy argument, which doesn't require an explicit interface, and therefore isn't compile-time checkable.	*Note to J3; not an edit*
Constraint: If the procedure has explicit interface, the kind type parameters of each *actual-arg* shall have the same values as the corresponding kind type parameters of the associated dummy argument.	
The above constraint also appears as ordinary normative text at 275:10-13. It is left there, because that paragraph also covers the case of a procedure not required to have explicit interface.	*Note to J3; not an edit*
[Editor: Add a space between "status" and "(9.9.1)."]	358:37

1.2 Needs an interp?

[Editor: Replace "subprogram" by "scoping unit".]	370:19
